New version of the Edig@s MIG for Capacity Trading Process now available

(BRUSSELS, 11 December 2017) The Message Implementation Guidelines (MIG) for the Capacity Trading Process (version 5.1, document version 4) prepared by the EASEE-gas Message and Workflow Design Working Group is now available for download on the Edig@s website ([click here](#)).

Following ENTSOG's approval of the version 19 of the Business Requirements Specification for the Capacity Allocation Mechanism Network Code (CAM/CMD BRS), the EASEE-gas Message and Workflow Design Working Group updated the MIG to align it with this new version of the BRS (see earlier version from July 2016 [here](#)). The following changes were made:

- Auction bid document now includes an indicator to show that the TSO terms and conditions have been accepted for the auction
- The document type flow commitment was removed in the reverse auction specification
- The following information was added to the transfer advice document:
 - The identification of the type of transfer being made (transfer of ownership or transfer of use);
 - The trading procedure used for the transfer (Call for Orders (CFO), First Committed First Served (FCFS) or Over the Counter (OTC));
 - The underlying tariff used (i.e. the regulated charge of the primary transaction underlying the secondary market deal);
 - The underlying surcharge (i.e. the surcharge of the primary transaction underlying the secondary market deal).

About EASEE-gas:

EASEE-gas (European Association for the Streamlining of Energy Exchange - gas) was set up in 2002 in order to develop and promote business practices to simplify and streamline both physical gas transfer and trading across Europe. At present, EASEE-gas has 92 full members (companies active in the European gas market). For more information, please visit www.easee-gas.eu or contact the office in Brussels.
