#### 38 About **EASEE-gas**

39

The European Association for the Streamlining of Energy Exchange-gas (EASEE-gas) was created by six founding members on March 14th, 2002. EASEE-gas's aim is to support the creation of an efficient and effective European gas market through the development and promotion of common business practices (CBPs) that intend to simplify and streamline business processes between the stakeholders.

The creation of EASEE-gas is a project that is fully supported by the European Commission and by the European Regulators through the so-called Madrid Forum. It was achieved through the work of a dedicated Task Force supported by EFET, Eurogas, Eurelectric, GEODE, GTE, OGP and the Edigas group.

49 *The association is fundamentally based on company membership and voluntary contribution* 50 *towards the development of common business practices.* 

Full membership in EASEE-gas is open to all companies, European or other, that are involved in the European gas business, from producers to end users, and to companies that are their service providers. Companies can subscribe to full membership in one or more of the eight gas industry segments.

Associate membership in EASEE-gas is open to government agencies, e.g. regulators, through to organisations such as gas business trade associations and to individuals that may contribute to the benefit of EASEE-gas. Associate members do not pay annual fees, nor do they have voting rights.

59 The development of common business practices within EASEE-gas is organised through 60 working groups under the supervision of an executive committee that is representative of the 61 various gas industry segments. Participation in the working groups is limited to members 62 only.

# 70CommonBusinessPractice2003-002/03"Harmonisationofthe71Nomination and Matching Process"

This following Common Business Practice CBP has been approved by EASEE-gas for use in gas business transactions across interface points<sup>1</sup> and constitutes recommendations for the part of the process which relates specifically to (re-)nominations and involves Shippers on one hand, and System Operators<sup>2</sup> – SOs on the other hand. This CBP reflects minimum requirements in line with the Network Codes, in the areas referred to in Article 8(6) of the Regulation (EC) 715/2009<sup>3</sup>. This CBP does not exclude additional provisions between individual parties.

79

# 80 <u>Gas Day</u>

Gas Day means the period from 5:00 to 5:00 UTC for winter time and from 4:00 to 4:00 UTC when daylight saving time is applied.<sup>4</sup>

83

### 84 Nomination scheme

### 85 General remarks

Nomination deadlines mentioned in this CBP document imply the use of electronic communication between all involved parties. As far as communication between Shippers and SOs is concerned, at present the most commonly used way is by using the EDIG@S protocol (CBP 2003-003) based on a common data network (CBP 2007-002) and a message transmission protocol (CBP 2007-001). However, back-up provisions have to be foreseen in case of communication problems.

For any given Gas Day, it is agreed that (re-)nominations can be sent at all times but not 92 earlier than 6 months before the concerned Gas Day. However, only the last valid (re-93 )nomination that was received by the SO communication system before a (re-)nomination 94 deadline will be taken into account. The time reference used in the nomination scheme is 95 'Coordinated Universal Time' (UTC<sup>5</sup>), as defined and recommended by the International 96 Radio Consultative Committee (IRCC), a predecessor organization of the ITU-T, and 97 maintained by the 'Bureau International des Poids et Mesures' (BIPM). (CCIR 98 Recommendation 460-4, or ITU-T Recommendation X.680 (7/94), contains the full 99 definition.) 100

101 The flow described in this document has to be understood as the quantity of gas in 102 energy per hour or per day (CBP 2003-001) related to the Nomination and Matching 103 Process.

<sup>4</sup> NC CAM – Article 1.2

<sup>5</sup> UTC is equivalent to mean solar time at the prime meridian (0° longitude), formerly expressed in GMT.

<sup>&</sup>lt;sup>1</sup> For the purpose of this CBP, interface points are defined as the points where gas sale/purchase/trade/transfer may be taking place

<sup>&</sup>lt;sup>2</sup> For the purpose of this CBP, the System Operator includes, at least, Transmission System Operators, LNG Terminal Operators, Storage System Operators, and Interconnector Operators but excludes the Distribution System Operators.

### 104Initiating SO and Matching SO

- 105 The Initiating SO is the System Operator initiating the matching process by sending 106 relevant data to the Matching SO.
- 107 The Matching SO is the System Operator performing the matching process and sending 108 the result of such process to the Initiating SO.

#### 109 Handling mismatches - `Lesser rule' principle

Flow shall be determined at both sides of an interface point on an identical basis. Therefore, during the process of validating and confirming (re-)nominations, the so called 'lesser rule' principle is recommended to be applied, meaning that in case of different quantities but for a same flow direction between a delivering and a receiving Shipper at the two sides of an interface point, and in case neither of the Shippers adjusts its position, the higher of the two values will be reduced by the Matching SO to the lower value in order to avoid a discontinuity over the interface point.

#### 117 Nomination scheme – deadlines

118 Shipper Deadline = 13:00 UTC, 12:00 UTC when daylight saving time is applied 119 (Gas Day D-1)

- Deadline for Shippers to submit nominations to their respective SOs for use on Gas Day D.
- SO Deadline = 15:00 UTC, 14:00 UTC when daylight saving time is applied (Gas Day D-1)
- Deadline for SOs to send a 'Confirmation Notice' to their respective Shippers having 124 submitted nominations before the Shipper Deadline. The Confirmation Notice will confirm 125 to the Shipper the (hourly or daily) quantities of gas that will be scheduled to flow on Gas 126 Day D. This implies that between the Shipper Deadline and the SO Deadline, the Initiating 127 SO sends to the Matching SO information with regard to the processed quantities and to 128 the nominated quantities when required. The processed quantities will take into account 129 the Shipper's nominations, contractual provisions (including constraints) between the 130 Shipper and the SO. The confirmed quantities will take into account the processed 131 quantities and the 'lesser rule'. The calculation of the confirmed quantities will be done by 132 the Matching SO between the Shipper Deadline and the SO Deadline. The confirmed 133 quantities as well as the processed quantities will be sent during this period by the 134 Matching SO to the Initiating SO. There is only one unique nomination cycle D-1. After 135 this cycle there's a continuous re-nomination cycle every hour until three (3) hours before 136 the end of the Gas Day D. 137

#### 138 **Re-nominations scheme**

As a general principle and as a minimum requirement, Shippers may submit renominations within the re-nomination period which starts immediately after the SO Deadline and ends not earlier than three (3) hours before the end of the Gas Day D.

142 The SO shall start a re-nomination cycle at the start of every hour within the re-143 nomination period.

Furthermore, the number of messages should be limited to the necessary information to be exchanged. As long as there is no new information, no additional message should be sent. However, in order to get a confirmation that a message has been received by the counterparty, an electronic acknowledgement should be foreseen.

148 SOs shall send the Confirmation Notice to confirm the rescheduled quantities for the Gas 149 Day D to the respective Shippers as soon as possible but not later than two (2) hours EASEE-gas Association loi 1901

77 Esplanade du General de Gaulle 92914 Paris, La Défense Cedex France www.easee-gas.eu Tel: +32 2 761 16 33 Fax: +32 2 761 16 99

150 from the start of each re-nomination cycle and before any gas flow change is due to come 151 into effect.

152

153 Message content and message rejection

- 154 All messages exchanged between the Shippers and the SOs shall include, at least:
- 155 the identification of the sender and recipient,
- the identification of the concerned interface point(s),
- 157 the identification of a nomination contract reference (optional),
- 158 the concerned period defined as a Gas Day,
- 159 the direction of the gas flow,
- 160 the identification of the start and end time of gas flow,
- information with regard to the receiving or delivering Shippers in the adjacent system
  in order to allow for a matching process.

Information with regard to Shippers in an adjacent system can be submitted in a coded way
 in order to ease the technical and operational processing of the Shippers' information.
 Issuing of codes will be administered by the relevant SO.

- All messages, being issued by the Shippers to the SOs shall also include the requested quantity in energy per hour or per day.
- All messages, being issued by the SOs to the Shippers, shall be composed of two basic sets of information regarding the quantity in energy per hour or per day:
- A first block of information relates to the Shipper in relationship with its SO and will provide the confirmed quantities of gas that will be scheduled by the SO, including the delivering or receiving Shippers in the adjacent system.
- A second block of information relates to information in relation to the Shipper, as received by the SO from the adjacent SO in relationship with its delivering or receiving Shippers towards said Shipper. This block will provide the processed quantities of gas that the adjacent SO is able or requesting to flow towards or from the Shipper for each delivering or receiving Shipper.
- 178
- 179 All messages exchanged between the SOs shall include, at least:
- 180 the identification of the sender and recipient,
- the identification of the concerned interface point(s),
- 182 the identification of a interconnection agreement reference (optional),
- 183 the concerned period defined as a Gas Day,
- 184 the direction of the gas flow,
- 185 the identification of the start and end time of gas flow,
- the processed quantity in energy per hour or per day that the SO is able to flow on
  its interface point side,
- the nominated quantity in energy per hour or per day as requested by the Shippers
  on its interface point side (optional),

EASEE-gas Association loi 1901

5

information with regard to the receiving or delivering Shippers in both systems in
 order to allow for a matching process.

All messages sent by the Matching SO to the Initiating SO after the matching process shall also include the confirmed quantity in energy per hour or per day.

194

A SO may reject a (re-)nomination as soon as reasonably possible and no later than 2 (two) hours after the (re-)nomination deadline:

• if the message does not comply with the requirements as to its content.

A SO may either reject, or amend a (re-)nomination as soon as reasonably possible and no later than 2 (two) hours after the (re-)nomination deadline in the following cases:

- in the case of daily nominations it results in a negative implied nomination flow rate;
- and/or it exceeds the Shipper's allocated capacity;
- and/or in the case of hourly nominations it results in an expected gas flow change
  before the end of the (re-)nomination cycle;
- and/or in accordance with National Rules or legally binding agreements between the
  SO and the shipper.
- In case of rejection, the SO shall provide an electronic rejection message with rejection reason(s).
- 208
- 209

# 210 **<u>Timing</u>**

This CBP should be implemented at the earliest technically and contractually possible date, but not later than  $1^{st}$  January 2015.
